

MEDIUM SHEAR FOOD EXTRUDERS (For Instant Food)

These Extruders are used for producing fast cooking instant food from maize, Rice, Soy or Semolina and Wheat base cereals either singly or in combination. Product to be dried and crushed after Extruder to get a consumable product.

Pilot Extruder (left) & Full Scale Extruder (Above)

The importance of these Extruder cannot be overemphasised...it's widely used to fulfill needs of fast cooking foods and breakfast cereals like baby food, instant food mixes, ready to eat upma (semolina), sheera, instant soy, Rice or Maize flours which could be fortified with agents to provide extra proteins, vitamins, flavour, etc. This Extruder produces a precooked food cereal and usually just by adding hot water to this, it provides a consumable and tasty food. Since the food cereals are cooked at some pressure and temperature, they are readily soluble in hot water with high absorption index. So provide a soft and delicious, nutritious product. Specially useful in this age of short time for people and students who are always on move and have less time to consume breakfast and food.

Pilot model is suitable for research, trial and small production. Full scale model is to be used for large scale commercial production.
